InvertNet

Advancing Digitization of Biological Collections

Arthropods (insects, spiders, crabs) are the most diverse and abundant group of macro-organisms in biological collections, but are underrepresented in databases accessible online or elsewhere. InvertNET is involved in compiling information from 160 years of North American arthropod collections and implementing the use of innovative technology like optical 3-D imaging and reconstruction. These efforts will support scientific inquiry on the effects of land use change on biodiversity and research on species discovery and identification.

- Download the Libraries of Life app from the iTunes or Google Play stores and install on your mobile device.
- Launch the app.
- Hold your mobile device camera about 6 inches away from card image.
- View specimen and click buttons to view content.
